

After Surgery Instructions

PLEASE keep the eye patched until your doctor removes it

PLEASE continue your other medications that you were taking prior to your surgery

PLEASE position your head as instructed by your doctor

Your vision may be blurry after the surgery because it is common to have an air bubble placed as a cast. The air bubble disappears without additional surgery.

DO protect the eye at night for two weeks with the shield provided to you on the first appointment

You may shower

You may watch TV, read, and use the computer

Contact your doctor as soon as possible if you notice:

Increasing pain

Increasing redness

Decreased vision

DON'T swim or lift heavy objects for 2 weeks after the surgery
