OPTIMAL SURGICAL RESULTS

TheraPosition™ and Face Down Positioning

Most doctors will prescribe a face down recovery period after a vitrectomy, surgery for macular hole or detached retina for optimal healing. Comfort in the face down position is key to helping you heal quickly!

"As an eye care professional, I know how important it is for vitrectomy patients to recover in a face down position for a prescribed period. TheraPosition™ is so comfortable, it won't be hard at all to comply to doctor's orders. In fact, it puts your body in such a relaxing position, you won't want to get up!"

DR. NEHA BHOJRAJ, OD

Spine Neutral Positioning: A Bonus!

NOT ONLY IS THERAPOSITION™ EFFECTIVE FOR YOUR SURGERY RECOVERY, IT IS ALSO HEALTHY FOR YOUR BODY!

TheraPosition™ places the body in neutral spine positioning, aligning all the vertebrae for optimum comfort, as you lie face down. We rarely experience this neutral spine positioning except in a professional massage environment. Imagine feeling the same freedom from stiffness and release of tension in the comfort of your own home!
